### **MMS Approves \$1 Million Grant for Louisiana Shoreline Protection**

*CIAP grant will help prevent coastal erosion*

**NEW ORLEANS** – The Interior Department’s Minerals Management Service (MMS) recently awarded a \$1 million grant to Calcasieu Parish in Louisiana through the Coastal Impact Assistance Program (CIAP), for a shoreline protection project at the parish’s Intracoastal Park.

Grant funding will create improvements to Intracoastal Park’s shoreline and slow the rate of coastal erosion that has occurred due to large boat traffic at the area’s bank. Intracoastal Park is located in southwestern Louisiana, approximately ten miles south of Sulphur in Calcasieu Parish.

“I welcome the opportunity to partner with the State of Louisiana on this vital coastal protection project,” said MMS Director Liz Birnbaum. “MMS is committed to assisting Louisiana in conserving and restoring state shorelines and natural resources through the Coastal Impact Assistance Program.”

The CIAP was created by the Energy Policy Act of 2005. Through the program, MMS will provide \$250 million in grants annually, from 2007-2010, to six eligible Outer Continental Shelf oil and gas producing states – Louisiana, Alabama, Alaska, California, Mississippi, and Texas. The funding to Louisiana includes \$127.5 million for each of the fiscal years 2007 and 2008, and \$120.9 million for 2009 and 2010. Nineteen Coastal Political Subdivisions (parishes) share in the funding of projects outlined in the state’s approved plan.
